

PROJECT: MAPLEARN EDU

GROUP NO: 01

BATCH: T2.2410.E0

1. System Requirements

Sr.	Item	Description
1.	Operating system	Windows 10/11, macOS, Linux
2.	Updates	Install the latest available version of Node.js, Git , Composer and PHP version 8.2.x
3.	Supported Software	Visual Studio Code or any IDE that can run Next.js
4.	Browser Compatibility	Microsoft Edge, Google Chrome, Mozilla Firefox, Safari, etc... (latest version)
6.	Hardware	• Intel Core i3/i5 Processor or higher • 8GB RAM or above • 500GB Hard Disk space • Color SVGA Graphics • Mouse and Keyboard
7.	Local Server Environment	• XAMPP (PHP 8.2, MySQL, Apache) • Laragon (PHP 8.2, MySQL, Apache/Nginx)
8.	Other requirement	A working internet connection, etc...

2. Installing Node.js and Git

2.1 Installing Node.js

1. Visit the Node.js official website
2. Download the LTS version (recommended)
3. Run the installer and follow the instructions
4. Verify the installation by running:

```
node -v  
npm -v
```

The output should display the installed versions of Node.js and npm.

2.2 Installing Git

1. Visit the Git official website
2. Download and install Git, selecting Git Bash if preferred
3. Verify the installation by running:

```
git --version
```

3. Installing from GitHub

1. Open Git Bash
2. Navigate to the desired directory:

```
cd path/to/your/folder
```

3. Clone the project repository:

```
git clone https://github.com/hoangtuanqn/maplearn-edu
```

4. Setting Up the Client

4.1 From GitHub

1. Open Git Bash
2. Navigate to the project folder

```
cd path/to/maplearn-edu
```

Replace 'path/to' with the actual folder path on your computer.

3. Enter the project directory:

```
cd client
```

4. Install dependencies:

```
npm install
```

5. Build the project:

```
npm run build
```

6. Start the project:

```
npm start
```

7. Open your browser and navigate to ***http://localhost:3000/***

4.2 Installing from Mirror File (Optional)

1. Download the **Mirror** file from the provided link
2. Extract the contents into a designated project folder

3. Open Git Bash and navigate to the extracted folder:

```
cd path/to/mirror-folder
```

4. Install dependencies:

```
npm install
```

5. Build the project:

```
npm run build
```

6. Start the project:

```
npm start
```

7. Open **http://localhost:3000/** to access the website.

5. Installing Composer and PHP version 8.2.x

5.1 Installing Composer

1. Visit the Composer official website
2. Download the LTS version (recommended)
3. Run the installer and follow the instructions
4. Verify the installation by running:

```
composer -v
```

The output should display the installed versions of Composer.

5.2 Installing PHP version 8.2.x

1. Visit the PHP official website
2. Download the PHP version 8.2.x
3. Run the installer and follow the instructions
4. Verify the installation by running:

```
php -v
```

The output should display the installed PHP version 8.2.x.

6. Setting Up the Server

6.1 From GitHub

1. Open **XAMPP/Laragon** and start Apache & MySQL.
2. Open Git Bash
3. Navigate to the project folder

```
cd path/to/maplearn-edu
```

Replace 'path/to' with the actual folder path on your computer.

4. Enter the project directory:

```
cd server
```

5. Install dependencies:

```
composer install
```

6. Run Database Migration and Seeders:

```
php artisan migrate --seed
```

*If you want to reset the database, you can use **php artisan migrate:fresh --seed***

7. Start the project:

```
php artisan ser
```

6.2 Installing from Mirror File (Optional)

1. Download the **Mirror** file from the provided link

2. Extract the contents into a designated project folder
3. Open **XAMPP/Laragon** and start Apache & MySQL.
4. Open Git Bash and navigate to the extracted folder:

```
cd path/to/mirror-folder
```

5. Install dependencies:

```
composer install
```

6. Run Database Migration and Seeders:

```
php artisan migrate --seed
```

7. Start the project:

```
php artisan ser
```

7. Troubleshooting (If any)

- If `npm install` fails, run:

```
npm cache clean --force  
npm install
```

- If there is a port conflict, change the port using:

```
PORT=4000 npm install
```

*You can change **PORT=4000** to any other number between 0 and 65535.*

- Ensure all required dependencies are installed by running:

```
npm list
```

8. Website Preview After Successful Installation

- After successfully installing and running the server, the website will be displayed as shown in the image below
